Revision Code: <u>A-2</u>		

OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Coho Salmon	Sept 4, 1997		X		

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: One coho salmon and one Dolly Varden captured in minnow
Trap set approx 100 yards down stream of Seward Highway culvert.
Trap set for 3 hours. See attached Data sheet. Due to dry
summer this stream was very low. Trap was placed at location where
water was deep enough to allow fish to enter trap. The stream appeared
to provide excellent coho rearing habitat. No fish captured upstream of Seward

Name of Observer (please print) Stewart Seaberg
